

Dear Hiring Manager,

I have been working towards a transition into software development over the last year, and was wondering if the Brio team is open to a non-student intern? I have significant experience working in a professional office environment with small teams as well as working with clients.

I've listed my Github account on my attached resume to demonstrate some basic skills with HTML, CSS, and Javascript. The first is a basic homepage with a function that calls a random background color every 3 seconds. The second is a simple counter that starts/stops with a button function.

My goal with interning is to gain experience working in a production environment with seasoned developers where I can be trained and prepared for a junior developer position (ideally at Brio!).

In addition to interning, I am willing to help with office/admin tasks if needed that are related to my previous experience.

Schedule Availability: 20 hrs / wk on site, can work additional hours as needed.

I look forward to speaking with you more about this opportunity.

Thank you,

Aaron Peazzoni
